AUTOMATED PRINTING

The Government Printing Office says it has found a way to print certain public documents cheaper and faster through the use of electronic computers and automatic typesetting equipment. The new method permits the transformation of capital and lower case letters from magnetic tape to punched tape, which is fed into a typesetting machine. Previously, only capital letters could be converted from magnetic to punched tape. The first pamphlet to be printed with the new system—a list of attorneys and agents registered with the Patent Office—was presented to Commerce Secretary Hodges (left) by Public Printer James L. Harrison in a ceremony at the Commerce Department.
